Go ahead and make your changes. I am waiting for Holly to get off a call. Obs #13 may have additional changes. Everything else is good.

Should I wait on Holly to send you responses on this?

Only substantial addition/clarification is that both of those samples (EPAMW02-0412-1 and EPAMW02-0412-2) had their internal standard areas above the associated standard (alkyl phenols) internal standard area counts. I don't know that there is criteria for the internal standard areas but I wanted to point that out, since they use internal standard calibration.

Dave

Dave-

Please see attached for comments. I know that Holly is reviewing it also, so more will probably be forthcoming.

Attached is our combined ADQ Report, that includes all previous versions into one single report. Please review, I have highlighted one sentence that was not in the Observations section in the prior (Version 3) report that you reviewed.

Thank you,

Dave
